

*Trusted protection  
doesn't have to  
be expensive.*

Your dog shouldn't have to deal with the discomfort of parasites or with the diseases they can cause. Para|Defense™ Advanced for Dogs, a once-a-month topical prevention and treatment that kills and repels the pests that affect your dog the most — ticks, fleas and mosquitoes. It contains the same active ingredients as K9 Advantix®II but at a fraction of the cost.

Remains effective after bathing and swimming

Costs less than the leading brand  
Available exclusively at the veterinary clinic.

## FLEAS.

Fleas are one of the most common external parasites for dogs. Fleas feed on a dog's blood. They lay eggs that can infest carpets, upholstery and bedding. Once you see one flea you are just seeing a small percentage of the problem. There is no such thing as one flea. Keep your home flea-free with Para|Defense Advanced for Dogs. It kills fleas in all life stages — without those fleas ever needing to take a bite. That means you won't have fleas on your pets or in your house. It also reduces the incidence of Flea Allergic Dermatitis (FAD).

## MOSQUITOES.

Mosquitoes have made a lot of news lately. It's hard to ignore the diseases they carry — and their effects on humans and pets. And you shouldn't ignore them. You should use Para|Defense Advanced for Dogs. Para|Defense Advanced for Dogs repels and kills mosquitoes for up to one month, often before they have a chance to bite and potentially spread disease.

## TICKS.

Ticks can carry diseases that are harmful to both you and your pet — Lyme disease, Rocky Mountain spotted fever and Ehrlichiosis. With Para|Defense Advanced for Dogs, you don't need to worry about any of them. Para|Defense Advanced repels and kills ticks for up to four weeks, including the types of ticks that could bring these diseases into your home: Deer ticks, American dog ticks, Brown dog ticks and Lone Star ticks.

### HOW TO APPLY.

To apply, simply follow the instructions on the package insert – and repeat every month:

- Prepare Applicator as shown in "How to Open" section of package insert: Tear through perforations. Fold back the safety tab. Cut with scissors to open applicator (along dotted line at top of applicator).
- Apply Para|Defense Advanced as shown in "How to Apply" section of package insert: It is important to part the hair on the dogs back between the shoulder blades until the skin is visible.

### TIPS.

- Avoid touching the wet application spot
- Wait 24 hours to allow solution to dry before bathing or letting your dog swim
- Give each of your dogs its own complete dose
- In cases of severe flea infestations, retreatment may be necessary earlier than one month. Consult your veterinarian.

- Repels and kills ticks for up to four weeks, including deer ticks, American dog ticks, Brown dog ticks and Lone Star ticks
- Repels and kills all life stages of fleas and may reduce the incidence of Flea Allergic Dermatitis (FAD)
- Repels and kills mosquitoes for up to one month, often before they have a chance to take a blood meal
- Repels and prevents blood feeding by biting flies
- Treats, prevents and controls biting lice

PROTECT AGAINST THE BITE OF DISEASE CAUSING PESTS
